

# REDBUS

- Develop a strong understanding of MongoDB, Express, Angular, and Node.js.
- User interfaces using Angular and Angular Material.
- Enhancing skills in TypeScript, component-based architecture, and state management.
- Backend Development with Node.js and Express.
- Focusing on middleware, routing, and Restful API design.
- Understand the principles of NoSQL databases.
- Manage data models using MongoDB including CRUD operations.
- Implement JWT (JSON Web Tokens) and Passport.js.
- Understand best practices for code organization, documentation, and teamwork.
- Restful APIs for seamless communication between the frontend and backend.
- Project management and collaboration using version control systems like Git.
